

# Getting the Most From Your KeZone™ Connection

KeZone is backed by KeConnect, the best\* ISP in the UK. It is always possible to test the strength of the wireless signal before purchasing a card. Your PC should automatically pick up the wireless signal from your pitch and it will be possible to visually see if the quality of the connection is of sufficient quality before purchasing a KeZone Card from reception.

## How to Connect

- Make sure your computer's wireless connection is turned on.
- Your computer should automatically pick up the KeZone wireless network. If it does not, choose 'KeZone' from the list of available wireless networks.
- Open your web browser. You will be redirected to the KeZone login page automatically. If this doesn't happen, click 'refresh' to make it to appear.
- Enter the username and password issued with your card or subscription. Alternatively, use your credit/debit card to get access for just 15p/minute.
- Click the 'Connect to KeZone' button to login.
- **Remember to log off when you are finished!**

## Wireless Reception

**The best reception will always be as close to the wireless access point as possible.** Ask a Site Warden where the best pitches are for Wi-Fi access.

PLEASE NOTE – the strength of your connection will be affected by the positioning and movement of other caravans around the site. **Wi-Fi works best on line of sight.**

Avoid simultaneous use of microwave ovens, Bluetooth devices and electrical appliances as these can all degrade the wireless signal.
